

COMMUNITY SUPPORTING EVIDENCE

Simulated Water Quality Screening Report

Prepared for the GroundTruth dynamic restoration bond demonstration. All organizations, samples, methods, thresholds, and results in this document are fictional.

PROJECT	REPORT ID	ISSUE DATE
Lower Fraser Restoration Demo	GT-WQ-2026-08-27-001	August 27, 2026
REQUESTING PARTY	SAMPLE DATE	STATUS
Authorized Community Representative	August 24, 2026	Final - Simulation Only

DEMO FINDING: SCREENING THRESHOLD EXCEEDANCES

Illustrative results for lead, cadmium, and arsenic exceed the fictional screening thresholds used in this demo. These values support a community dispute and automatically pause the simulated restoration bond release.

Analytical summary

Analyte	Result	Demo threshold	Unit	Flag
Lead	0.028	0.010	mg/L	EXCEEDS
Cadmium	0.0068	0.0010	mg/L	EXCEEDS
Arsenic	0.014	0.010	mg/L	EXCEEDS
Copper	0.004	0.020	mg/L	Within
Zinc	0.031	0.120	mg/L	Within
Mercury	<0.0002	0.001	mg/L	Within

The demo threshold is an illustrative application rule and is not a regulatory standard. No health, environmental, compliance, or remediation conclusion may be drawn from these synthetic values.

Recommended demo action

Open a community dispute targeting liability decision revision 03. Attach this report and its SHA-256 hash. The GroundTruth program should increment the active dispute count and pause bond release in the same transaction.

This page is part of a synthetic hackathon dataset. It is not a certificate of analysis.

FIELD RECORD

Sampling context and custody

Simulated collection photograph. The image contains no real sample location or identifiable field personnel.

Sample custody

Sample ID	Location	Matrix	Collection	Condition
LF-RXB-01	River cross-section B	Surface water	Aug 24, 09:42	Accepted
LF-RXB-DUP	Field duplicate	Surface water	Aug 24, 09:45	Accepted
LF-FB-01	Field blank	Reagent water	Aug 24, 10:10	Accepted

Field observations

Water appeared clear to slightly turbid following light rainfall. No visible sheen, odour, or acute biological stress was recorded. The absence of visible pollution does not establish chemical safety. Observations and values are included solely to support the demo workflow.

Illustrative method notes

Metals are presented as if measured by ICP-MS following preservation and digestion. Field duplicate agreement and blank results are shown as acceptable for demonstration purposes. These method labels do not represent work performed by an accredited laboratory.

IMPORTANT

Synthetic evidence - not for scientific, legal, regulatory, or health decisions
